Professional Summary

Software Engineer with 6+ years of experience in backend and full stack development, with a strong background in digital health and payment platforms. I work mainly with Node.js, TypeScript and NestJS, building scalable APIs with PostgreSQL, MySQL, SQL Server and MongoDB, as well as Angular and React on the frontend. I design backend solutions focused on scalability, performance and maintainability, applying Clean Code, DDD and AI tools to speed up development, code review and testing.

Professional Experience

- **GetConnect | Digital Health Management** / Mid-Level Software Engineer
  Dec 2024 – Oct 2026
  Full stack development of a telemedicine platform for online medical consultations and the management of primary care units.
  - Working on the migration of legacy LoopBack microservices to a modern NestJS architecture, taking part in technical implementation decisions.
  - Built a feature that eliminated the root cause of a recurring type of support ticket, reducing support demand on the development team by 50%.
  - Integrated the platform with AI speech-to-text services for audio transcription.
  - Implemented integrations with external data repositories and asynchronous service-to-service communication using Google Cloud Pub/Sub.
  - Develop end-to-end features with Node.js, NestJS, TypeScript, PostgreSQL and Angular, using Docker on GCP, leveraging AI to generate tests and apply Clean Code, and performing code reviews.
- **Kirvano** / Backend Developer
  Aug 2023 – Dec 2024
  Backend of the members area and back office of a payments and digital products platform.
  - Built scalable REST APIs with Node.js, TypeScript, Express and NestJS, documented with Swagger to speed up frontend integration.
  - Integrated the back office with payments, subscriptions, checkout, members area, producer dashboard and affiliates systems.
  - Created private packages shared across the company's backends, standardizing common code and reducing duplication.
  - Reduced endpoint response times by replacing sequential asynchronous calls with parallel execution (Promise.all).
  - Implemented queues with BullMQ, caching with Redis and scheduled jobs (cron jobs) to consolidate data for internal reports, using Docker and serverless on AWS.
- **DuoSystem Tecnologia & Informática** / Mid-Level Software Developer
  Jun 2023 – Aug 2023
  - Defined technical solutions for improvements to a public health regulation system, performed code reviews and mentored junior developers.
  - Implemented integrations with file upload APIs and the browser Web Speech API, adding voice features to the system.

- **DuoSystem Tecnologia & Informática** / Junior Software Developer
  May 2021 – Jun 2023
  Public health regulation system used by hospitals, urgent care centers, primary care units and medication dispensing pharmacies in Brazil.
  - Developed end-to-end features, from database to user interface, using PHP (Laravel and CodeIgniter), JavaScript and SQL Server.
  - Optimized SQL report queries through indexing, rewriting joins and subqueries, and using temporary tables, cutting generation time from 2 minutes to 40 seconds.
  - Fixed bugs and worked on the ongoing maintenance of a critical service for the public health network.
- **DuoSystem Tecnologia & Informática** / Software Development Intern
  Dec 2019 – Apr 2021
  - Extracted reports for business teams using SQL queries on SQL Server and implemented small improvements in PHP and JavaScript.

Projects

- **Time Entertainment** – Founder and developer | timeentertainments.com
  SaaS platform for tracking TV series, movies, anime and games, built from scratch to deployment with the help of AI.
  - Full stack application with Angular, NestJS, TypeScript and PostgreSQL, with queues (BullMQ), caching (Redis) and Stripe subscriptions, hosted on a VPS.
  - Daily release calendar synchronization through cron jobs and integration with the TMDB, TheTVDB and RAWG APIs.
- **Student Workspace (Final Project)** | github.com/Lucas-Vinicius27/student-workspace
  - Productivity web app based on the Pomodoro Technique, built with Next.js, React, TypeScript, Firebase Authentication and Cloud Firestore.

Education

- **Bachelor's Degree in Computer Science** – Universidade Paulista (UNIP) – 2018 to 2023
- **English Language Course** – Cultura Inglesa – 2025

Technical Skills

- **Backend:** Node.js, NestJS, Express, LoopBack, PHP (Laravel, CodeIgniter)
- **Frontend:** Angular, React, Next.js, TypeScript, JavaScript
- **Databases:** PostgreSQL, MySQL, SQL Server, MongoDB, Redis
- **Messaging and jobs:** BullMQ, Google Cloud Pub/Sub, cron jobs
- **Cloud and DevOps:** Docker, AWS, Google Cloud Platform (GCP), Linux VPS, Git, GitLab
- **Integrations:** REST APIs, Swagger, Stripe, Firebase
- **Practices:** Clean Code, DDD, automated testing (Jest), code review, AI-assisted development

Languages

- **Portuguese** – Native
- **English** – Intermediate
